

EZ STAK BUILD YOUR OWN TUTORIAL

Before you begin, click on the **HELP** button to view the tutorial

The first screen will be this:

Click the *next arrow* and you will see this screen:

HELP ✕

Once you have selected a product you want, you can then click and drag it into either of the two truck grids in the center region of the page.

These grids represent the left and right walls of your truck as though you were looking at them from inside. The truck icon in the lower corner of the grid points towards the front (cab) of the vehicle. The guides on the grid indicate how long your truck will be; placing a product after the 14 feet (144 inches) guide, but before the 16 feet (168 inches) guide means your layout is for a 16 foot truck.

Click the *next arrow* and you will see this screen:

HELP ✕

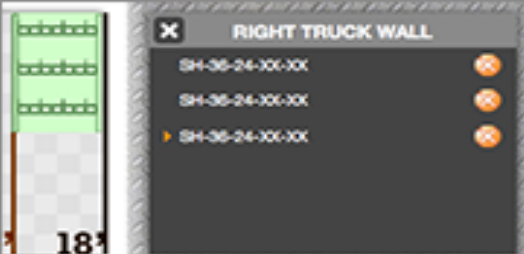

You can delete a product by dragging it at least half way over the trash panel in the center region and dropping it. The trash can icon and a red highlight will indicate when it is set to be deleted.

If you see this icon while dragging, that means that you cannot drop the product in that location (either it is hovering over another product or outside of the truck grids). If you do drop it, the product will return to its last valid location.

Click the *next arrow* and you will see this screen:

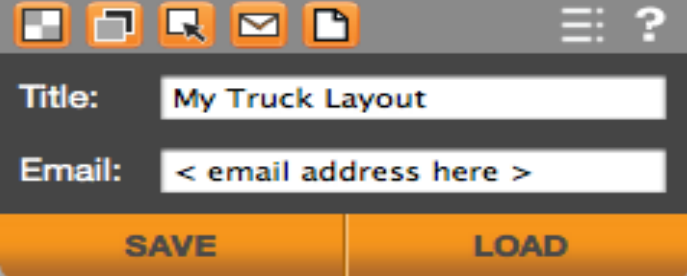

As you add products to each wall, they will be listed in the product lists in the right region of the page. Hovering over an item in this list will highlight the corresponding product in the grid.

-  You can delete an individual product by clicking the circular x icon beside it.
-  Alternatively, you can clear a whole grid by clicking the square x icon in the top left corner of the appropriate list.

You are almost done. Important ICONS here

Click the *next arrow* and you will see this screen:

You can save and load your layout at any time by using the control panel in between the product lists. Each page is tied to the unique id that is generated in the pages url. By bookmarking the page, you will be able to reload your layout at any time.

-  If you would prefer to not keep track of your various layouts, you can save them with a valid email address. If you enter that email and click the mail button, we will send you a list of all the layouts you have saved to that particular address. You can also provide a title to make each layout more easily identifiable in the list.

Click the *next arrow* and you will see this screen:

HELP ✕

The new layout and copy layout buttons are there to allow you to start fresh or duplicate a layout with ease. Both buttons will open a new window with a new unique id, meaning the new page will not conflict with the original.

-  The new layout button gives you a clean layout with no save data.
-  The copy layout button will pre-populate the grids with the same products as your current layout. It will also perform an initial save of the copied layout.
-  The pdf button will take your layout and convert it to a printable pdf document. The latest save will be used, so make sure to save it before hand.

Click the *next arrow* and you will see this screen:

HELP ✕

 Finally, the submit button is what allows you to pass your layout on to us. When you have finalized the design, click submit and fill out the presented form. We need this information to properly handle your request.

 You can save these details along with your layout by clicking the layout details button. While saving these details is not required, it will speed up the submission process.

 Thank you for submitting your layout, we will contact you shortly

DRAG HERE TO DELETE

Once you have submitted the design, we will receive a copy. You will not be able to make any changes to our copy even if you alter the original layout. If you do make a mistake, you can make another submission and confirm which one is final when you are contacted by our staff.

Thank you for choosing EZStak!
