

Designing and Building Mobile Trailers

EZ STAK delivers turnkey trailer in 10 days.

The team at EZ STAK takes the time to understand what the trailer is going to be used for, who's going to use it and what it's going to be carrying. They think about weight and power capacities, tool requirements, what kind of vehicle is going to be towing it, and what kind of climate it's going to be working in. There is a lot of thought into ergonomics and safety.

The Problem ▶ In the summer of 2016, K-Line was ready to convert their 22-foot trailer into a mobile workshop, but they ran head-on into one a familiar problem: trying to buy components from different suppliers and make them fit seamlessly together inside a single trailer.

The Solution ▶ EZ STAK designed a concept of a trailer with fully-insulated and polyurethaned walls and ceilings, an electrical panel and shore power capabilities, and a long maple workbench where K-Line could mount a drill press and a vice. It also had drawer units, overhead cabinets, closets with perforated doors and even a whiteboard in the office area near the front. With the final design in hand, the EZ STAK crew got to work to deliver the trailer in 10 days later.

The Result ▶ Ten days later, the trailer was ready for delivery to K-Line. Wetzel and his team could not have been happier with the final result. In a written statement, Wetzel said, "We weren't sure how we would design the layout of our mobile work trailer, but EZ STAK helped us lay out and utilize every inch of space. We were amazed and ultimately very pleased with the quality and workmanship of their modular interior storage solutions. Would we recommend EZ STAK? Absolutely."

This 22-foot-long trailer was upfitted and delivered in 10 days.

Let's discuss how EZ it is to spec your next trailer upfit solution.
